

Apps enable users to manage and adjust lighting - and other connected services such as blinds and temperature - to suit their personal preference using mobile and office devices.

- native apps allows users to adjust lighting levels and scenes
- individual or group control based on user access rights
- full dimming range available from mobile device
- mobile device acts as controller for presentations and meetings
- integrated QR codes for location based actions
- control of lighting and other connected services including temperature, smart glass, blinds, AV etc

Apps are just one of a wide range of mix-and-match Delmatic user control options and devices.
